EDUCATION

University of Pittsburgh, School of Computing and Information <i>Bachelor of Science in Computer Science, Bachelor of Science in Data Science</i>	Pittsburgh, PA April 2027
David C. Frederick Honors College <i>Honors Degree</i> - GPA: 3.73/4.00 - Courses: Computer Org & Assembly Lang, Discrete Structures, Data Structures & Algorithms (Java)	Pittsburgh, PA April 2027

EXPERIENCE

SAP Analyst PTP Intern <i>Gordon Food Service</i> - Support SAP Procure-to-Pay (PTP) operations and enterprise procurement workflows across large-scale business systems. - Work with certified datasets using BigQuery, SQL, and dbt to support data analysis and reporting initiatives.	May 2026 – Present Grand Rapids, MI
Undergraduate Research Assistant <i>University of Pittsburgh</i> Developing a LLaMA LLM with LoRA fine-tuning in PyTorch and building a LangGraph-based multi-agent workflow for packet trace analysis, enabling real-time cyberattack detection.	September 2025 – Present Pittsburgh, PA
Undergraduate Teaching Assistant – Data Structures and Algorithms <i>University of Pittsburgh</i> Lead weekly recitations for 30+ students, teaching key topics including arrays, stacks, and heaps.	September 2025 – Present Pittsburgh, PA
Pitt IT Computing Lab Consultant <i>University of Pittsburgh</i> Provided technical support for campus computing and printing infrastructure, performed system monitoring, troubleshoot hardware/software issues, and ensured uptime and reliability of networked devices.	February 2025 – May 2025 Pittsburgh, PA

PROJECTS

Atlas AI (Multi-Agent Travel Planner) <i>Python, Google ADK, Gemini 2.5, FastAPI, Docker, Google Cloud Run, Next.js, Vercel</i> - Built and deployed a live multi-agent travel planner that turns one plain-English prompt into a grounded, route-optimized day-by-day itinerary in roughly 40–60 seconds, orchestrating 4 specialized Gemini 2.5 agents on Google ADK with a FastAPI backend on Google Cloud Run and a Next.js frontend on Vercel. - Cut routing errors and per-plan inference cost to near-zero for trip sequencing by offloading it from the LLM to a deterministic pure-Python 2-opt TSP solver, leaving the model to write only against a provably optimal route. - Eliminated hallucinated recommendations and held public-endpoint cost to a few cents per itinerary via typed Pydantic schemas with required-field forcing functions, live Google Maps/Flights/Booking deep-links, Flash/Flash-Lite model tiering, and per-IP rate limiting with a global spend cap.
VO2 (Research-Grade Wearable Analytics Platform) <i>Next.js, FastAPI, Plotly</i> - Engineered a full-stack platform (Next.js, FastAPI, Plotly) to ingest and analyze longitudinal WHOOP, Oura, and Garmin biometric data. - Designed statistically rigorous self-experiments using time-series analysis, hypothesis testing, and retrieval-augmented generation (RAG) grounded in PubMed literature. - Awarded Best AI for Decision Support at Carnegie Mellon University's TartanHacks for impact-driven health analytics.
AI Competitive Intelligence Agent <i>Python, FastAPI, Docker, Google Cloud Run, BigQuery, Anthropic Claude API, React</i> - Delivered real-time competitive intelligence on any public company in under 30 seconds (end-to-end API response time) by implementing an agentic LLM loop using the Anthropic Claude API with integrated web search tooling. - Achieved zero infrastructure cost at rest by deploying a Dockerized FastAPI application to Google Cloud Run, which auto-scales to zero between requests; managed credentials with Secret Manager and persistence with Google Cloud Storage.

CERTIFICATIONS

Google Cloud Certified — Associate Cloud Engineer	July 2025
--	-----------

TECHNICAL SKILLS

Languages: Java, Python, C, C#, SQL, JavaScript, HTML/CSS
Frameworks: React, Next.js, Node.js, FastAPI, Flask, JUnit
Developer Tools: Git, Docker, dbt, BigQuery, Google Cloud Platform, Google Cloud Run, TravisCI, VS Code, IntelliJ, Eclipse
Libraries: Pandas, NumPy, Matplotlib, Plotly, PyTorch, Pydantic
